

Le Quang Vinh

AI Engineer | Prompt Engineer | Software Engineer

📞 +84 985 189 541 | ✉️ lea26462@gmail.com | 🌐 github.com/Vinh-Gogo | 🎂 Feb 23, 2001

From: 📍 An Giang Province | Work: 📍 Ho Chi Minh City

Career Objective

Leverage CNNs and LLMs to automate workflows and enhance operational efficiency. Seek real-world AI-driven projects where I can deliver measurable impact while maximizing the practical advantages of AI technologies.

Education

Industrial University of Ho Chi Minh City

2021 – 2025

B.Sc. Computer Science

Work Experience

Backend Contractor

05/2025 – 07/2025

Office of Investment & Planning, IUH 🔗 Deployed: pkhdtiuh.com

Projects

SuperNova MCP RAG - Team: 2 people

08/2025 – Current

SUPER NOVA RAG: Vietnamese Multi-Agent System (Python)

- A hierarchical system with one AI Executive Director overseeing specialized AI agents (RAG, Database, Planning, Translation). The director supervises their work, verifies results, and responds to user queries within 15 seconds. The system supports multiple languages.
- Ability to learn PDF documents over 100 pages and provide answers based on the supplied knowledge.
- Ensures strict control over humanity, accuracy, and user satisfaction.

Use Cases: Supports consulting and conveying the values or products you have to users.

AI Chat FB: 🔗 PyPy - Automatics Agent Mini

Backend Framework & APIs: OpenAI, LangChain, Langgraph, Docker / APIs Services, Models Open Source.

Benchmark: 3 200 queries, RAG hybrid accuracy: $95 \pm 1\%$ Hit@1, $99 \pm 0.9\%$ Hit@5.

Depth Estimation (Thesis & Researching) - Team: 3 people.

02/2025 – Current

CNN-Based Image Depth Estimation Methods (Tensorflow)

- Computer Vision. The eyes of the system are positioned above – they serve as the vision that perceives and understands how the human world operates.

Use Cases: 3D Reconstruction (Point Cloud), Object Segmentation, Industrial Applications, Pose Estimation.

Source Part 1: 🔗 github.com/Vinh-Gogo/depth-estimation

Core Technologies:

- Convolutional Autoencoder (CAE), ResNet, U-Net, U-Net combining ResNet & DenseNet, U-Net SE ResNet-Dense with Squeeze-and-Excitation, Attention block, Transformers.

Evaluate: Image Similarity & Distance Metrics. Balance between **accuracy** and **efficiency**.

Dataset: LineMOD Dataset (Available on Google Drive, GitHub and BOP website).

Results Test (1 200 images): Accuracy: 90%, Cosine Similarity: 97%.

Soft Skills

Weekly tech-share (30+ session), Communication, Problem-solving, Logical thinking, Time management.
